

COMPOSITE***What is the matching side panel made of – is it the same core as the door?***

The core of the matching side panel is made from a composite sandwich which is 39mm thick. This is different to our doors which have a Kerto core and are 48mm thick. Though both matching side panel & door use the same Compax skin.

What's the maximum width for a double door?

The maximum width of a double door is 1936mm.

Can I have any skin colour other than white on the inside?

We offer the choice of all colours on both the outside AND inside.

From which door designs can stable doors & french doors be made from?

All door designs in our Endurance range can be used for both stable doors & french doors.

What do I use to clean the door – and do I need to perform any maintenance to the door?

We insist that only a soft cloth in soapy water be used to wipe the door down. We also recommend that the door lock must be lubricated with a non-solvent based lubricant at least four times a year, and in respect of doors fitted in coastal areas at least once a month.

What are the RAL numbers for your colour range?

The nearest RAL numbers are White 9010, Red 3003, Blue 5003, Green 6005, Black 9017. We do however suggest you request colour swatches.

Do you offer any other glass designs other than those in your brochure?

All the glass designs we offer can be found in our brochure, though if you do not see what your looking for then please contact us.
